Universitatea din Bucuresti

19 Ianuarie 2021

Examen final

Disciplina: Ecuatii cu derivate partiale
Tipul examinarii: Examen
Nume student: ______________________________
Seria 31: Grupele 311, 312 ______________________
Timp de lucru : 3 ore si 15 min (incluzand atasarea rezolvarilor pe Moodle)

Acest examen contine 5 probleme (toate obligatorii).

Examenul este individual. Nu uitati sa va salvati foile cu rezolvarile subiectelor intr-un singur fisier de tip PDF in timp util astfel incat sa va incadrati in cele 3 ore si 15 minute pentru incarcarea fisierului pe platforma Moodle.

Salvati fisierul PDF creat cu numele vostru (Nume_Prenume_Grupa.pdf).

Pentru elaborarea lucrarii scrise puteti folosi orice materiale ajutatoare.

Pentru redactare tineti cont de urmatoarele sugestii:

- Daca folositi o teorema fundamentala, rezultat cunoscut, etc **indicati** acest lucru si explicati cum se poate aplica rezultatul respectiv.
- **Organizati-va munca** intr-un mod coerent pentru a avea toti de castigat ! Incercati ca la crearea fisierului PDF fiecare problema sa fie redactata in ordinea aparitiei pe foaia cu subiecte. Ideal ar fi ca si subpunctele sa fie redactate in ordine. Daca nu stiti a rezolva un anumit subpunct scrieti numarul subpunctului si lasati liber.
- Raspunsurile corecte dar argumentate incomplet (din punct de vedere al calculelor/explicatiilor) vor primi punctaj partial.

Barem: P1 (2p) + P2 (1.5p)+ P3 (2p) +P4 (1.5p)+P5 (2p) + 1p oficiu= **10p** (Plus eventual BONUS acolo unde este cazul in functie de activitatea/temele din timpul semestrului).

Pentru orice nelamuriri scrieti-mi la adresa cristian.cazacu@fmi.unibuc.ro, sau lasati un mesaj pe chat-ul grupei creat pe Microsoft Teams.

Rezultatele finale vor fi postate pe Moodle si Microsoft Teams in cel mai scurt timp posibil, dar dupa proba orala.

Problema 1. *(2p).*

1). Calculati $\mathrm{div}(|x|^2 \cdot \nabla v(x))$*, unde* $v : \mathbb{R}^4 \setminus \{0\} \to \mathbb{R}$, $v(x) := |x|^{-\frac{5}{3}}$.

2). Sa se determine pentru ce valori $p \geq 1$ *are loc* $|v|^p \in L^1(B_1(0))$*, unde* $B_1(0)$ *este bila unitate din* $\mathbb{R}^4$.

3). Sa se determine pentru ce valori $p \geq 1$ *are loc* $\frac{|v(x)|^p}{|x|^2+1} \in L^1(\mathbb{R}^4 \setminus \overline{B_1(0)})$.

4). Dati exemplu de o functie strict subarmonica ($-\Delta u < 0$) *pe* $\mathbb{R}^2$ *care sa se anuleze pe dreapta* $x + 3y = 0$.

5). Consideram functia $u : B_1(0) \setminus \{0\} \to \mathbb{R}$ *data de*

$$u(x) = \left(\ln \frac{2}{|x|}\right)^{\frac{1}{2}}, \quad x = (x_1, x_2),$$

unde $B_1(0)$ *este bila unitate din* $\mathbb{R}^2$ *centrata in origine. Aratati ca*

$$-\Delta u(x) = \frac{u(x)}{4|x|^2 \ln^2(\frac{2}{|x|})}, \quad \forall x \in B_1(0) \setminus \{0\}.$$

Problema 2. *(1.5p). Se considera problema la limita*

$$(1) \qquad \begin{cases} u_{xx}(x,y) + 2u_{yy}(x,y) = 0, & (x,y) \in (0,1) \times (0,1) \\ u(x,0) = u(x,1) = 0, & x \in (0,1),\ y \in (0,1) \\ u(0,y) = \sin(2\pi y),\ u(1,y) = e^{-2\sqrt{2}\pi} \sin(2\pi y), & y \in (0,1). \end{cases}$$

1). Determinati solutia problemei (1) *cautand-o in variabile separate sub forma* $u(x,y) = A(x)B(y)$.

*2). * Aratati (folosind eventual metoda energetica) ca* (1) *are cel mult o solutie de clasa* C^2.

Problema 3. *(2p). Consideram urmatoarea problema de tip "unde"*

$$(2) \qquad \begin{cases} u_{tt}(x,t) - u_{tx}(x,t) - 6u_{xx}(x,t) = 0, & x \in \mathbb{R}, t > 0, \\ u(x,0) = f(x), & x \in \mathbb{R}, \\ u_t(x,0) = g(x), & x \in \mathbb{R}, \end{cases}$$

unde $f, g \in C^2(\mathbb{R})$ *sunt functii date.*

1). Aratati ca daca $u = u(x,t)$ *este o functie de clasa* C^2 *atunci* u *verifica*

$$(\partial_t + 2\partial_x)(u_t(x,t) - 3u_x(x,t)) = u_{tt}(x,t) - u_{tx}(x,t) - 6u_{xx}(x,t),$$

pe domeniul sau de definitie.

2). Rezolvati problema cu valori initiale satisfacuta de u *in* (2) *(scrieti forma generala a lui* u*) reducand-o la rezolvarea a doua ecuatii de transport (una omogena si alta neomogena).*

3). Folosind conditiile la $t = 0$ *deduceti solutia* u *a problemei* (2) *in cazul particular* $f(x) = \sin x$ *si* $g(x) = e^{-x}$.

Problema 4. *(1.5p). Consideram problema Cauchy*

$$
\left\{
\begin{array}{ll}
u_t(x,t) - u_{xx}(x,t) + \frac{e^t}{e^{2t}+1}u(x,t) = 0, & x \in \mathbb{R},\ t > 0, \\
u(x,0) = e^{-x^2}, & x \in \mathbb{R}.
\end{array}
\right.
\tag{3}
$$

1). Gasiti o functie $\phi : \mathbb{R} \to \mathbb{R}$ *astfel incat functia* $v(x,t) := u(x,t)\phi(t)$ *sa verifice ecuatia caldurii*

$$
v_t(x,t) - v_{xx}(x,t) = 0, \quad \forall x \in \mathbb{R},\ \forall t > 0. \tag{4}
$$

2). Scrieti problema Cauchy verificata de v *si determinati explicit solutia problemei* (3)*.*

Problema 5. *(2p). Fie functia* $f : [-1,1] \to \mathbb{R}$, $f(x) = |x - \frac{1}{2}|$.

1). Explicitati functia f *si faceti graficul functiei* f.

2). Sa se determine punctele de derivabilitate ale lui f *pe intervalul (-1,1).*

3). Argumentati ca $f \in H^1(-1,1)$ *si calculati norma lui* f *in* $H^1(-1,1)$ *(precizati inainte norma cu care lucrati).*

4). Determinati $\alpha \in \mathbb{R}$ *astfel incat functia* $z : (0,1) \to \mathbb{R}$, $z(x) = x^\alpha$ *sa apartina lui* $H^1(0,1)$.

*5). * Determinati* $\alpha \in \mathbb{R}$ *astfel incat functia* $z : (1,\infty) \to \mathbb{R}$, $z(x) = \frac{x^\alpha}{1+x^3}$ *sa apartina lui* $W^{1,3}(1,\infty)$.

19.01.2021

Guiță Bianca-Oana

Ecuatii derivate parțiale

~ examen ~

Problema 1

1) Calc $div(|x|^2 \cdot \nabla u(x))$, unde $u : R^4 \setminus \{0\} \to R$

$$u(x) := |x|^{-\frac{5}{3}}$$

$$\nabla u(x) = -\frac{5}{3} x |x|^{-\frac{5}{3} - 2}$$

$$= -\frac{5}{3} x |x|^{-\frac{11}{3}}$$

Avem din seminar următoarea formulă:

$$div(x|x|^{\lambda}) = (n+\lambda)|x|^{\lambda}$$

$$div\left(|x|^2 \cdot \left(-\frac{5}{3}\right) \cdot x \cdot |x|^{-\frac{11}{3}}\right) = -\frac{5}{3} div\left(x \cdot |x|^{-\frac{5}{3}}\right)$$

$$= -\frac{5}{3}\left(4 - \frac{5}{3}\right)|x|^{-\frac{5}{3}}$$

$$= -\frac{5}{3} \cdot \frac{7}{3} |x|^{-\frac{5}{3}} =$$

$$= -\frac{35}{9} |x|^{-\frac{5}{3}}$$

2) Pt ce valori $p \geq 1$ are loc $|u|^p \in \mathcal{L}^1(B_1(0))$, $B_1(0)$ bila unitate R^4.

$$\int_{R^4 / B_1(0)} |u|^p \, dx < \infty$$

$$\int_0^1 \left(\int_{\partial B_s(0)} |u|^p(t) \, d\sigma(t) \right) ds = \int_0^1 s^{-\frac{5}{3}p} \cdot \underbrace{|\partial B_s(0)|}_{s^{4-1} \cdot w_4} ds$$

$$= \int_0^1 s^{-\frac{5}{3}p} \cdot s^3 \cdot w^4 \, ds$$

$$= \omega_4 \int_0^1 s^{\frac{-5p+9}{3}} \, ds$$

$$\frac{-5p+9}{3} + 1 > 0$$

$$-5p + 12 > 0$$

$$-p > -\frac{12}{5} \Rightarrow p < \frac{12}{5} \rightarrow p \in [1, \frac{12}{5})$$

3) Pt ce valori $p \geq 1$ are loc $\frac{|u(x)|^p}{|x|^2+1} \in \mathcal{L}^1(\mathbb{R}^4 \setminus \overline{B_1(0)})$

Notez $w(x) = \frac{|u(x)|^p}{|x|^2+1}$

$$w(x) = \frac{||x|^{-\frac{5}{3}}|^p}{|x|^2+1}$$

$$\int_{\mathbb{R}^4 \setminus B_1(0)} w(x)\,dx = \int_1^\infty \left(\int_{\partial B_s(0)} w(t)\, d\sigma(t) \right) = \int_1^\infty \left(\int_{\partial B_s(0)} \frac{|t|^{-p\cdot\frac{5}{3}}}{|t|^2+1} \, d\sigma(t) \right) ds$$

$$= \omega_4 \int_1^\infty \frac{s^{-\frac{5}{3}p} \cdot s^3}{s^2+1} \, ds \sim \omega_4 \int_1 s^{-\frac{5}{3}p} \cdot s \, ds = \int_1^\infty s^{1-\frac{5}{3}p} \, ds$$

$\frac{s^{-\frac{5}{3}p} \cdot s^3}{s^2+1}$ asemenea cu $\frac{s^{-\frac{5}{3}p} \cdot s^3}{s^2}$

$$1 - \frac{5}{3}p + 1 < 0$$

$$2 - \frac{5}{3}p < 0$$

$$\boxed{p > \frac{6}{5}}$$

4) Ex fct subarmonică $(-\Delta u < 0)$ R^2

$$x + 3y = 0$$

$$x = -3y \,|^2 \Rightarrow x^2 = 9y^2$$

$$0 = 9y^2 - x^2$$

Fie $u : R^2 \to R$ cu $u(x,y) = 9y^2 - x^2$

$$u_x(x,y) = -2x$$

$$u_{xx}(x,y) = -2$$

$$u_y(x,y) = 18y$$

$$u_{yy}(x,y) = 18$$

$$u_{xx} + u_{yy} = 16 = \Delta u$$

$-\Delta u = -16 < 0 \Rightarrow u$ e subarmonică

$$u = (3y - x)(3y + x)$$

Problema 2

$$\begin{cases} u_{xx}(x,y) + 2u_{yy}(x,y) = 0 \\ u(x,0) = u(x,1) = 0 \\ u(0,y) = \underline{\sin(2\pi y)},\ \underline{u(1,y) = e}^{-2\sqrt{2}\pi} \sin(2\pi y) \end{cases}$$

1) $\underline{u(x,y) = A(x)B(y)}$

$u_{xx} = A''(x)B(y)$

$u_{yy} = A(x)B''(y)$

$u(0,y) = A(0)\cdot B(y) = \sin(2\pi y)$

$u(1,y) = A(1)B(y) = e^{-2\sqrt{2}\pi}\cdot\sin(2\pi y)$

Avem:

$$\begin{cases} A''(x)B(y) + 2B''(y)A(x) = 0 \text{ (din prima rel din sistem)} \\ A(x)B(0) = A(x)B(1) = 1 \text{ (din a II-a ---)} \\ \left.\begin{array}{l} A(0)B(y) = \sin(2\pi y); \\ A(1)B(y) = e^{-2\sqrt{2}\pi}\sin(2\pi y) \end{array}\right\} \text{ din a III-a ....} \end{cases}$$

$A''(x)B(y) = -2B''(y)A(x)$

Dacă împărțim prin $A(x)$, obținem

$\frac{A''}{A}(x)\cdot B(y) = -2B''(y)$

$\Rightarrow \frac{A''}{A}\cancel{(x)} = -2\frac{B''}{B}(y)$

Luăm $\lambda = \frac{A''}{A}(x) = -2\frac{B''}{B}(y)$

$B(y) = \frac{\sin(2\pi y)}{A(0)}$

$\Rightarrow \cancel{A}B''(y) = \frac{-4\pi^2\sin(2\pi y)}{A(0)} = -4\pi^2 B(y)$

Deci dacă avem:

$\frac{B''(y)}{B(y)} = -4\pi^2$, rezultă că $\lambda = 8\pi^2$

Egalez apoi $\frac{A''(x)}{A(x)} = 8\pi^2$ și obțin $A''(x) - 8\pi^2 A(x) = 0$

Notăm ec. caract.

$\lambda^2 - 8\pi^2 = 0$

$\lambda^2 = 8\pi^2$

$\lambda = \begin{cases} -2\sqrt{2}\pi \\ +2\sqrt{2}\pi \end{cases}$

$A(x) = C_1 \cdot e^{-2\sqrt{2}\pi} + C_2 \cdot e^{+2\sqrt{2}\pi}$

$A(1) = C_1 e^{-2\sqrt{2}\pi} + C_2 e^{2\sqrt{2}\pi}$

$A(0) = C_1 + C_2$

$B(y) = \frac{\sin(2\pi y)}{C_1 + C_2}$ $\quad B(0) = B(1) = 0 \Rightarrow \frac{\sin 0}{C_1 + C_2} = \frac{\sin 2\pi}{C_1 + C_2} = 0$

Luăm $c_1 = 0$

$c_2 = 1$

$\begin{cases} A(0) = 1 \\ A(1) = e^{-2\sqrt{2}\pi} \\ B(y) = \sin(2\pi y) \\ A(x) = e^{-2\sqrt{2}\pi} \end{cases}$

2) Cu met energ, cel mult o sol C^2

$\begin{cases} \text{Fie } U = u_1 - u_2 = 0 \\ U_{xx}(x,y) + 2U_{yy}(x,y) = U_{xx}(x,y) + 2U_{yy}(x,y) \\ - U_{2xx}(x,y) - 2U_{2yy}(x,y) = 0 \\ U(x,0) = U(x,1) = 0 \end{cases}$

Problema 3 Pb de tip „unde"

$$\begin{cases} u_{tt}(x,t) - u_{tx}(x,t) - 6u_{xx}(x,t) = 0, & x \in \mathbb{R}, t > 0 \\ u(x,0) = f(x) & x \in \mathbb{R} \\ u_t(x,0) = g(x) & x \in \mathbb{R} \end{cases}$$

1) $u = u(x,t)$ fct clasa C^2, a.î.

$$\underbrace{(\partial_t + 2\partial_x)(u_t(x,t) - 3u_x(x,t))}_{} = u_{tt}(x,t) - u_{tx}(x,t) - 6u_{xx}(x,t)$$

$(\partial t + 2\partial x)(u_t(x,t) - 3u_x(x,t)) =$

$= u_{tt} \underbrace{- 3u_{xt} + 2u_{tx}}_{} - 6u_{xx}$

$= u_{tt} - u_{tx} - 6u_{xx}$

Știm că $u_{tx} = u_{xt}$ $\forall u \in C^2$

2) ec. de transport

$u_{tt}(x,t) - u_{tx}(x,t) - 6u_{xx}(x,t) = 0$

$(\partial t + 2\partial x)(u_t - 3u_x) = 0$

Notăm $v = u_t - 3u_x$

$(\partial t + 2\partial x) \cdot v = \begin{cases} v_t + 2v_x = 0 \\ v(x,0) = u_t(x,0) - 3u_x(x,0) \quad \text{ec. omog.} \\ v(x,0) = g(x) - 3f'(x) \end{cases}$

v const. pe $(2,1)$:

$v(x,t) = v(t(2,1) + (x-2t, 0))$

$= v(t(2,1)) + v(x-2t, 0)$

$= v(x-2t, 0)$

$v(x,t) = g(x-2t) - 3f'(x-2t)$

Rescriem sistemul:

$$\begin{cases} u_t - 3u_x = g(x-2t) - 3f'(x-2t) \quad \text{ec neomog.} \\ u(x,0) = f(x) \\ u_t(x,0) = g(x) \end{cases}$$

Notăm $w(s) = u(x(s), t(s))$

$w'(s) = u_t(x(s), t(s)) \cdot \underbrace{t'(s)} + u_x(x(s), t(s)) \cdot \underbrace{x'(s)}$

Avem că $t'(s) = 1 \Rightarrow t(s) = C_1 + s$

$x'(s) = -3 \Rightarrow x(s) = C_2 - 3s$

și luăm $C_1 = t$, $C_2 = x$

și obținem $w(s) = u(x-3s, t+s)$

$w'(s) = u_t(x-3s, t+s) + (-3)u_x(x-3s, t+s)$

$w'(s) = g(x-2t-5s) - 3f'(x-2t-5s)$

$$\int_0^s w'(\varphi)\,d\varphi = \int_0^s g(x-2t-5\varphi)\,d\varphi - 3\int_0^s f'(x-2t-5\varphi)\,d\varphi$$

Not $\int_0^s w'(\varphi)\,d\varphi = I_1$

$I_1 = w(s) - w(0)$

$I_1 = u(x-3s, t+s) - u(x,t)$

Luăm $s = -t$.

$I_1 = u(x+3t, 0) - u(x,t) = f(x+3t) - u(x,t)$

Dar $I_1 = \underbrace{-\int_{-t}^{0} g(x-2t-5\varphi)\,d\varphi}_{I_2} + 3\underbrace{\int_{-t}^{0} f'(x-2t-5\varphi)\,d\varphi}_{I_3}$

$$I_2 = -\frac{1}{5}\int_{x-7t}^{x-2t} g(z)\,dz$$

S.V. $x-2t-5\varphi = z$

$\varphi = 0 \Rightarrow z = x-2t$

$\varphi = -t \Rightarrow z = x-7t$

$-5\,d\varphi = dz$

$d\varphi = -\frac{1}{5}\,dz$

$$y_3 = -\frac{1}{5} f(x-2t-5\varphi)\Big|_{-t}^{0}$$

$$= -\frac{1}{5}\left(f(x-2t) - f(x-7t)\right)$$

Ayadası, $y_1 = f(x+3t) - u(x,t)$

$$u(x,t) = f(x+3t) - y_1$$

$$u(x,t) = f(x+3t) + y_2 - 3y_3$$

$$u(x,t) = f(x+3t) - \frac{1}{5}\int_{x-7t}^{x-2t} g(z)\,dz + \frac{3}{5}\left(f(x-2t) - f(x-7t)\right)$$

3) $t=0$

$f(x) = \sin x$

$g(x) = e^{-x}$

$$u(x,t) = \sin(x+3t) - \frac{1}{5}\frac{e^{-z}}{-1}\Big|_{x-7t}^{x-2t} - \frac{2}{5}\sin(x-2t) + \frac{3}{5}\sin(x-7t)$$

$$= \sin(x+3t) + \frac{1}{5}e^{-x+2t} - \frac{1}{5}e^{-x+7t} - \frac{3}{5}\sin(x-7t)$$

Problema 4

$$\begin{cases} u_t(x,t) - u_{xx}(x,t) + \dfrac{e^t}{e^{2t}+1} u(x,t) = 0 \\ u(x,0) = e^{-x^2} \end{cases}$$

1) $v(x,t) := u(x,t)\,\phi(t)$ verif ec. căldurii

$$v_t(x,t) - v_{xx}(x,t) = 0 \quad \forall x \in \mathbb{R}, \forall t > 0$$

$$v_t(x,t) = \frac{\partial}{\partial t}\left(u(x,t)\,\phi(t)\right)$$

$$= u_t(x,t)\,\varphi(t) + u(x,t)\,\varphi'(t)$$

$$v_{xx} = u_{xx} \cdot \varphi(t)$$

$$v_t - v_{xx} = u_t\,\varphi(t) + u\,\varphi'(t) - u_{xx}\,\varphi(t) = 0$$

Împărțim ec. prin $\varphi(t)$.

$$u_t(x,t) + u(x,t)\frac{\varphi'(t)}{\varphi(t)} - u_{xx}(x,t) = 0.$$

Avem că
- $u_t(x,t) - u_{xx}(x,t) + \dfrac{e^t}{e^{2t}+1} u(x,t) = 0$
- $u_t(x,t) - u_{xx}(x,t) + \dfrac{\varphi'(t)}{\varphi(t)} u(x,t) = 0$

$$\frac{e^t}{e^{2t}+1} = \frac{\varphi'(t)}{\varphi(t)} \quad \Big| \int$$

$$\int \frac{e^t}{e^{2t}+1}\,dt = \int \frac{\varphi'(t)}{\varphi(t)}\,d\varphi(t)$$

Fie $e^t = q$

$$\int \frac{1}{q^2+1}\,dq = \operatorname{arctg}(q) + \mathcal{C}$$

$$= \operatorname{arctg}(e^t) + \mathcal{C}$$

$$f(t) = e^{\operatorname{arctg}(e^t)} \cdot \mathcal{C}$$

Să zicem că $\mathcal{C} = 1$ așă $f(t) = e^{\operatorname{arctg}(e^t)}$

2.) Scrieți pb Cauchy + det sol

Rescriem sistemul în fct de v.

$$v_t(x,t) - v_{xx}(x,t) = 0$$

$$v(x,0) = u(x,0)\, f(0) = e^{-x^2} \cdot e^{\frac{\pi}{4}}$$

$$v(x,t) = u(x,t) \cdot f(t)$$

$u(x,t)$ sol

$$u(x,t) = e^{\frac{\pi}{4}} \int \frac{1}{\sqrt{4\pi t}} \cdot e^{\frac{|-x-y|^2}{4t}} \cdot e^{-y^2}\, dy$$

$$= e^{\frac{\pi}{4}} \int_{-\infty}^{\infty} \frac{1}{\sqrt{4\pi t}} \cdot e^{-\frac{x^2-2xy+y^2}{4t}} \cdot e^{-y^2}\, dy$$

Fie schimbarea de variabilă.

$$z = e^y$$

$$dz = e^y\, dy$$

$$u(x,t) = e^{\frac{\pi}{4}} \int_{-\infty}^{\infty} \frac{1}{\sqrt{4\pi t}} \cdot e^{-\frac{x^2}{4t}} \cdot e^{\frac{2xy}{4t}} \cdot e^{-y^2} \cdot e^{-y^2}\, dy$$

$$= e^{\frac{\pi}{4}} \int_{-\infty}^{\infty} \frac{1}{\sqrt{4\pi t}} \cdot e^{-\frac{x^2}{4t}} \cdot e^{\frac{2xy}{4t}} \cdot e^{-2y^2}\, dy$$

Și avem: $z(-\infty) = e^{-\infty} = 0$ $\qquad \frac{dz}{e^y} = dy$

$$z(\infty) = e^{\infty} = \infty$$

$$e^{-2y^2} = e^{-y^2} \cdot e^{-y^2} =$$

$$= (e^y)^{-2} \cdot (e^y)^{-2}$$

$$= \frac{1}{e^{y^2}} \cdot \frac{1}{e^{y^2}} = \frac{1}{z^2} \cdot \frac{1}{z^2} = \frac{1}{z^4}$$

$$u(x,t) = \frac{1}{\sqrt{4\pi t}} \cdot e^{\frac{\pi}{4}} \int_0^\infty \left(e^{-\frac{x^2}{4t}} \cdot z^{\left(\frac{2x}{4t}-1\right)} \cdot \frac{1}{z^4}\right) dz$$

$$u(x,t) = \frac{1}{\sqrt{4\pi t}} \cdot e^{\frac{\pi}{4}} \cdot e^{-\frac{x^2}{4t}} \int_0^\infty \left(z^{\left(\frac{2x}{4t}-5\right)}\right) dz$$

$$u(x,t) = \frac{1}{\sqrt{4\pi t}} e^{\frac{\pi}{4}} e^{\frac{-x^2}{4t}} \left(\frac{z^{\frac{2x}{4t}-4}}{\frac{2x}{4t}-4}\right)\Bigg|_0^\infty$$

$$u(x,t) = \frac{1}{\sqrt{4\pi t}} e^{\frac{\pi}{4}} e^{\frac{-x^2}{4t}} \cdot$$

$$\frac{z^{\frac{2x}{4t}-4}}{\frac{2x}{4t}-4}\Bigg|_0^\infty = \lim_{a\to\infty} \frac{a^{\left(\frac{2x}{4t}-4\right)}}{\left(\frac{2x}{4t}-4\right)} - \lim_{b\to 0} \frac{b^{\left(\frac{2x}{4t}-4\right)}}{\left(\frac{2x}{4t}-4\right)}$$

$$u(x,t) = \frac{1}{\sqrt{4\pi t}} \cdot e^{\frac{\pi}{4} - \frac{x^2}{4t} + \operatorname{arctg} e^t}$$

Problema 5

$f : [-1, 1] \to R, \ f(x) = \left|x - \frac{1}{2}\right|$

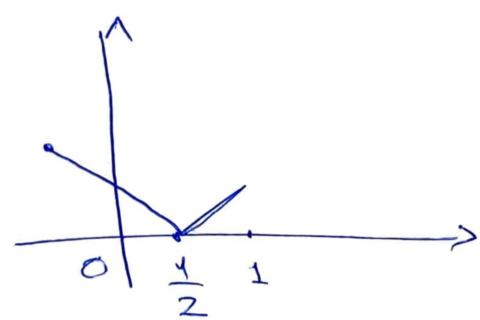
1) f, G_f

$f(x) = \left|x - \frac{1}{2}\right|$

$x - \frac{1}{2} \Rightarrow x \geq \frac{1}{2}$

$-x + \frac{1}{2} \Rightarrow x < \frac{1}{2}$

x	-1	0	$\frac{1}{2}$	1
$f(x)$	$\frac{3}{2}$	$\frac{1}{2}$	0	$\frac{1}{2}$



2) pct de derivab. f pe $(-1, 1)$

f derivab pe $\left(-1, \frac{1}{2}\right)$

f deriv pe $\left(\frac{1}{2}, 1\right)$

f deriv în $\frac{1}{2}$ $\Rightarrow f'(s) = f'(d)$

$$\left.\begin{array}{l} f'(s) = \left(x - \frac{1}{2}\right)' = 1 - 0 = 1 \\ f'(d) = \left(\frac{1}{2} - x\right)' = 0 - 1 = -1 \end{array}\right\} \neq$$

~~f deriv doar~~ ,

$\Rightarrow$ f nu e deriv.
